ABSTRACT

Exclusive Workshop: Global Digital Health Policy and Strategy Development

Prof. Rajendra Pratap Gupta (India)

The world is looking at 'Health for All' through Universal Health Coverage. In fact, it was in 1978, at Alma Ata, that we pledged to achieve Health for All by 2000. It has been 45 years since the Alma Ata declaration, and the goal of Health for All still remains a dream. Given the increasing demands of populations and the growing divide in the healthcare system and service delivery, it is time to consider leveraging technology to progress towards our goal of 'Health for All', which still remains a distant dream for the majority of the global population. Can we at least promise and deliver 'Digital Health for All' by 2028, as we approach the 50th anniversary of the Alma Ata declaration? This will be crucial for delivering comprehensive primary care for all. This workshop will draft a global strategy to ensure 'Digital Health for All by 2028'. This will include high-level and comprehensive policy directives and key principles of this global strategy to ensure 'Digital Health for All by 2028', covering developed, developing, and underdeveloped countries. This will look at various aspects, including the need gap, technology preparedness, human capacity, financial resources, communication strategy to achieve Digital Health for All by 2028.
